

T41-EP SDR Transmitter specs

- 7-band, HF on SSB and CW
- based on Frank Dziock (DD4WH)'s Convolution SDR code
- Fully independent SDR, no connected computer required.
- Internal computing runs off of a Teensy 4.1 from PJRC
- Open source

T41-EP SDT Transmitter Filter module

- T41-EP SDT v12 BPF Module

- This board contains a multitude of toroid cores and capacitors to out-of-band signals
- Prevents overloading of RX circuitry
- Prevents amplification/transmission of spurious signals prior to transmitter poweramp stage
- Contains voltage regulator (3.3v)
- Each line of LC is tuned for the respective HF band

Note that this is a fully DIY radio, and thus tuning must be done manually using a VNA
